

CV – Erik Malte Rasmussen – Part one – Personality and work areas

CV

I have worked in Pharmaceuticals since 1987 often combining my clinical background with my IT skills typically bridging the business side in clinical development and pharmacovigilance with system management and regular IT operations. I expect to be working professionally until 67+ years.

I prefer varied responsibilities in a position where not all tasks become 'routine' matters. Moreover, I thrive on working with other people and contacts. I like to analyse business needs and to design viable frameworks for solving these needs.

I like situations where I 'sell' ideas and concepts. I favour my actions, behaviour and attitude to be so, that I will be invited back, when a 'customer' sees new and future needs. I am well at ease in international environments. I am happy to get to learn new people, cultures and organisations.

I enjoy a balanced mix where I am a part of a greater team in which I can make heavy contributions and have a substantial impact. Although I myself can work with very technical details, I often delegate and share this with colleagues with sufficient competencies. In such processes I value having a supporting, motivating and sparring role.

As a person I am social, service-minded and out-going. I am very communicative, verbally and in writing. I get positive energy through interaction with other people. I like teamwork allowing for solid personal impact as well as reaching the overall team goals. I am a role model and can inspire colleagues and staff to perform and develop. I am used to work cross-functionally. By nature a goal directed and no-nonsense person who is oriented towards tasks leading to profit, sustainability and personal, team and company successes. My preferred management style (up/down) is a company-specific adaptation of situational leadership. I like professional challenges and deliver on-time and within budgets. So far my deliverables are focused on deployment and use in highly regulated (in- and externally) business-critical areas with zero-tolerance for errors and lateness - and subject to audits and external authority inspections.

My work so far and competences include (but is not limited to):

- all aspects of clinical studies, from planning, protocols, execution and reporting
- creation of CRFs, development of data entry applications
- Design, development and administration of safety systems; home-grown and COTS
- SAS application programming and development; Signal Detection
- Authoring PV and GCP SOPs
- URS and RfP authoring, implementation and upgrades of COTS safety systems
- Design of GxP validation plans, test cases, test scripts, validation reports
- Oracle based work, incl SQL+, third party tools (Toad, Cognos, Business Objects, etc)
- Corporate dictionary management, MedDRA, WHO-DD and WHO-ART
- Design of MedDRA implementation strategies for several companies
- Design and execution of E2B implementation in three pharmas
- Design of automated compliance reporting tools and applications
- Line management of up to 6 staff members
- Project Management (Prince2 certified, Foundation and Practitioner)
- Design and programming (SAS) of advanced signal detection application for client
- Exhaustive lecturing in various external fora in DK and throughout Europe, US and Canada
- Consultancy work (primarily clinical evaluations and data management) in own company, DataService

1980 – 1986: Study and graduation; Royal Dental College (Copenhagen University)
1976 – 1978: Sergeant, Motorised Infantry, SJLR

Personal interests and qualifications/competencies:

I am single (divorced) with a permanent girlfriend. Key interests include wines, music (classical, contemporary and jazz), dogs, aircrafts, F-1 racing, photography, travelling, computers and literature.

During my army days I learned, that I am quite good as role model and at motivating other to do demanding tasks. Followingly I studied and became a dentist. After a year in dental practise, I realised that dentistry was not sufficiently challenging for the rest of my professional life. I joined Leo Pharma in 1987 and have remained with the industry since then.

From late teens I have had a keen interest in all IT related matters from my first programmable TI calculator. While studying I made commercial software as well as purely theoretical, mathematical software. During study years I worked with assisting customers pay their power bills as well as worked with disabled, elderly people. In parallel to my normal jobs, I have for some 15+ years also worked very successfully as an independent IT data management consultant for international pharmas as well as for other companies. For a number of years I have served as speaker, workshop leader, lecturer and as chair in numerous international open conferences, university lectures and training courses in DK, Europe, US and Canada.
